	First pass risk assessment	Second pass risk assessment	Detailed (third pass) vulnerability and risk assessment
Objective	Develop a quick and high level understanding of	Conduct a qualitative risk assessment	Understand vulnerability of different systems that are exposed to
	climate change risk in your area to determine	(generally involving expert judgement) to	climate change related hazards using more detailed and finer scale
	whether you need to undertake further research or	identify specific risks that may become	data; conduct a detailed risk assessment (quantitative or qualitative) to
	action planning at this time (e.g. develop a climate	problematic under future climate change.	identify <i>specific risks</i> of <i>different systems</i> ; identify and <i>prioritise</i>
	change adaptation plan).		adaptation actions.
Data requirement	Nationally available datasets, which may be in a	Nationally available climate change datasets	Some site specific data (depending on the objective of the assessment
(refer to	published report or paper (e.g. summary regional	(e.g. <u>Climate Change in Australia</u> website)	and may not necessary every time), for example LIDAR data, in
Information Manual	projections and/or visualizations of climate variables	together with existing information available	conjunction with high resolution (daily, spatially explicit) climate
<u>3: Available</u>	and sea level rise). Available localised mapping and	from local council studies and/or expert	scenarios data, and local expert knowledge to understand exact scale
<u>datasets</u> for more	information.	knowledge	of the risk.
detail)			
Time and resource	Minimum	Moderate	High
requirement			
Expertise	 Minimum expertise required to acquire data 	Minimum expertise required to acquire	High expertise required to acquire site specific data (may not be
requirement	 Local knowledge required to interpret data. 	data	necessary for all assessments).
	 Some understanding of climate change and its 	Moderate expertise required to interpret	• High expertise required to apply data, analyse and interpret results.
	potential risks (readily-available in CoastAdapt)	data	High expertise required for understanding how a given climate-risk
	 Moderate expertise required for community 	Moderate expertise required to	can translate into a number of consequences for your business.
	communication, understanding and liaison	understand the consequences of a specific	High expertise required in community engagement
		climate risk.	
		Moderate expertise required for	
		communication or community consultation	
Example outcome	Inundation around some of our coastal area may be	Due to a rise in sea level there is a high risk	Beach road will be inundated more frequently in future (due to
	problematic in future	that beach road may get inundated during	increase in sea level and intensity of storms). Material of the road is
		future storm events	not designed to withstand this level of frequency, therefore may
			require higher cost in maintenance. Foundation of the road may be
Evenuele of evitable		Develop a mean datailed understanding of	destabilised as coastal erosion intensines.
example of suitable	Develop a quick and broad understanding of	Develop a more detailed understanding of climate change rick to the community or	Produce detailed impact studies of climate change effects on specific installations and activities, with a full understanding of probabilities.
context of use	 Identify a pood for strategic and ongoing 	organisation	and uncortainties involved
	 Identify a fleed for strategic and ongoing response (commitment) 	 Identify key risk localities with follow up 	Estimate costs of adaptation action and prioriticing allocation
	 Identify key localities for attention 	resourcing requirements	Confirm emergency response procedures (requirements)
	Ruild awareness of rick amongst community or	Get huv-in from community or senior	Develop strategic and economic evaluation of adaptation entions
	• Build awareness of risk anongst community of	management for developing an adaptation	Develop strategic and economic evaluation of adaptation options Develop adaptation action plans
	senior management	strategy or nlan	
		Produce targeted climate risk	
		communication materials	
Limitations	Based on high-level screening and therefore not	Based primarily on qualitative expert	Resource and time intensive Requires expert input
	suitable for making any final decisions on adaptation	judgement of risk, therefore results are as	
	actions	good as the qualitative judgment of the	
		experts
